Vivolution A/S changes name to Vivostat A/S

Building on the goodwill of the successful Vivostat® product line, Vivolution A/S has decided to change the company name to Vivostat A/S

The last couple of years Vivostat A/S – formerly known as Vivolution A/S - has experienced a growing demand for the company's Vivostat® products in both existing and new markets. Following very promising clinical results from the second-generation product, the company last year decided to establish direct sales forces in two of the main markets, Germany and the UK. Vivostat A/S is now ready to approach still more market segments with the innovative Vivostat® blood processing technology.

"Having established direct sales organizations in Germany and the UK, we recognize a strong need to be even more precise and consistent in the way we communicate with our customers and partners in the healthcare world", says Tom Bjerg Lauritzen, CEO of Vivostat A/S.

Since 2001 the Vivostat® brand name has been associated with high-quality medical devices that provide healthcare professionals with safe alternatives in the growing market for surgical sealants and platelet concentrates.

Tom Bjerg Lauritzen explains, "The change of name is a natural step in the development of our company. By changing the company name from Vivolution A/S to Vivostat A/S we seek to build upon the goodwill created by our successful Vivostat® products during the last 7 years - and thereby establish strong synergies between corporate and product related communication".

The change of name takes effect immediately, and as a result all company and product communication will be focused around the Vivostat® name in the future.

Vivostat A/S is currently in the process of launching a second-generation product, Vivostat® PRF®, for the treatment of chronic ulcers. Chronic ulcers are a serious problem for many diabetic patients and there is currently no treatment available for this condition.

About Vivostat A/S

Vivostat A/S is a privately owned company based in the Medicon Valley of Scandinavia. Our products, Vivostat® Fibrin Sealant and Vivostat® PRF®, utilizes the patient's own blood to derive either a surgical sealant to prevent and stop bleedings, or a gel with a high concentration of growth factors (PRF®) that stimulates the healing of chronic wounds.

By using the patient's own blood there is no risk of allergic reactions or transfer of viral diseases. This is an increasingly important factor as more and new viruses, such as Asian bird flu etc., develop.

Our products are sold through direct sales organisations and distributors throughout Europe and Asia - mainly to surgical departments and wound care centres. More than 98% of our sale is export.
